

4Q22 & FY2022 Financial Results

9 February 2023

Birna Einarsdóttir
Chief Executive Officer

Jón Guðni Ómarsson
Chief Financial Officer

Strong financial results in a volatile market environment

ROE of 11.1% in 4Q22 and 11.8% in 2022 mainly driven by growth in core income

Solid top line growth in 4Q22 and 2022

NII and NFCI, ISKbn

Low C/I ratio supported by strong revenues

C/I ratio

ROE above target

ROE

Strong asset quality

Loans to customers: Stage 2 and 3 (NPL)

Financial targets reached in 2022

Resulting from strong revenue generation and strict cost control

	Targets	4Q22	2022
Return on equity	>10%	11.1% ✓	11.8% ✓
Cost-to-income ratio¹	<45%	42.5% ✓	42.1% ✓
CET1 capital ratio²	~16.5%	18.8% ✓	18.8% ✓
Dividend-payout-ratio	50%		50% ✓

1. Calculated as (Administrative expenses + Contribution to the Depositors' and Investors' Guarantee Fund – One-off items) / (Total operating income – One-off items). 2. Long term CET1 capital target is subject to regulatory requirements and includes a management buffer of 50-200bp.

Attractive capital return and growth opportunity

Strong underlying economic momentum

Growth

- Loans to customers and revenues, in general, **to grow** in line with **nominal GDP** growth through the business cycle
- Attractive interest rate environment
- The Icelandic economy projected to grow by 3.4% in real terms in 2023

ROE

- ROE in 2023 expected to be in the 10-11% range**, assuming normalised through-the-cycle impairment levels at 25-30bp
- Short term outlook for impairments rather favourable due to low NPL ratios and forecasts for positive GDP growth and low unemployment in 2023
- C/I ratio expected to be in 40 - 45% range** in 2023. Inflationary pressure on cost base partly offset by high rates environment

Financial strength

- ISK 12.3bn in ordinary dividend** to be proposed to AGM, in line with dividend policy
- ISK 5bn of share buyback planned** over the coming few months through a market based share buyback program
- Capital optimization** planned before YE 2024, subject to market conditions

1. Shaded area: Forecast, ISB research. 2. Q3 2022 numbers for EU average and Nordic average.

Adjustment phase ahead for the Icelandic economy

Moderate GDP growth on the cards after an impressive surge

Steadier, export led growth to take over from the strong recovery...
Real GDP and main subitems, YoY change, %

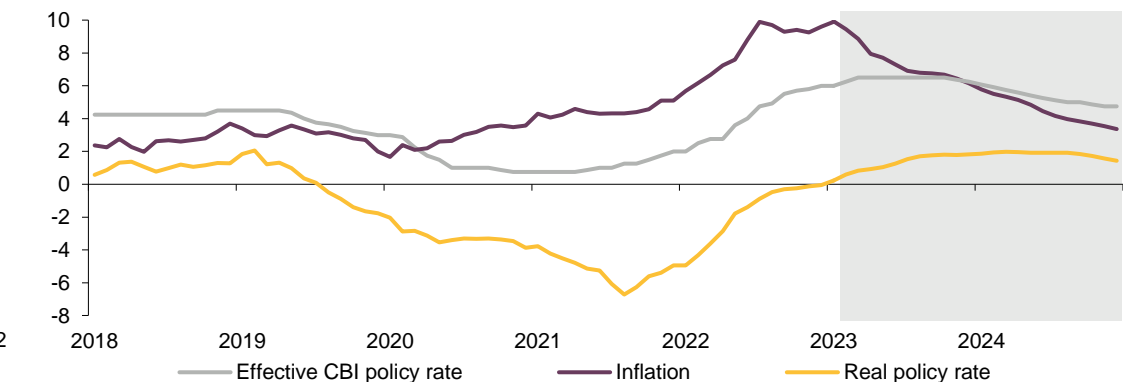

..and housing market remains resilient, partly due to flexible mortgage market
Share of different types of mortgage loans of total outstanding mortgage stock

Moderate leverage throughout the economy increases resilience to shock...
Gross debt as % of GDP

...while more persistent inflation has led to tighter monetary policy
Inflation and policy rate, %

The Icelandic economy and society draw on many strengths

Heating and electricity generation based on sustainable energy sources

Iceland ranks highly on a variety of global development benchmarks

Income inequality is low compared to OECD peers

Gini coefficient, OECD, most recent data available

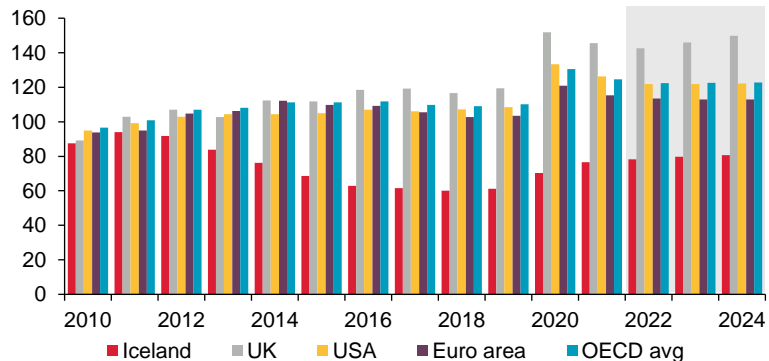

Sustainable energy usage is prevalent

Energy consumption by source, 2020

Public debt remains sustainable after pandemic

General govt. gross financial liabilities, % of GDP

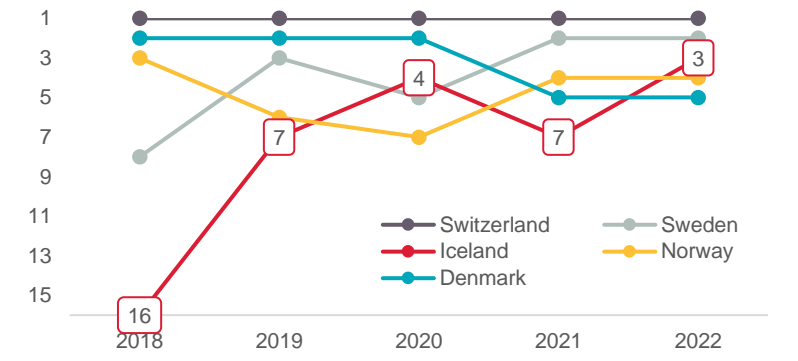

Export base has grown more diverse over time

Export contribution by industry, 9M 2022

Iceland ranks highly in attracting/retaining talent

IMD World Talent Ranking 2018-2022

Strong results across business units

Increased personalised digitalisation results in higher service levels

Personal Banking

16.1% ROE

49.2% Cost-to-income ratio

2.8% NIM

More customers enjoy benefits of the cash back loyalty program Friða with 37% increase in users YoY

Active app users increased by 11% YoY, with nearly 33 million app visits in 2022

First bank in Iceland to launch Google Wallet™

Enhanced procedures adopted to prevent customers from fraudulent transactions

Business Banking

21.0% ROE

38.4% Cost-to-income ratio

5.6% NIM

Good growth in lending volumes with 17.5% growth in 2022

Highest NPS score amongst domestic peers

Serves 55% of Iceland's outstanding companies

ESG risk assessment completed 58% of BB's loan portfolio

Number of visits to the app has increased by 46% between years

Corporate & Investment Banking

12.6% ROE

35.5% Cost-to-income ratio

3.2% NIM

Íslandsbanki is a leading player in corporate finance in Iceland

New lending totalled ISK 72bn

Revenues from FX Sales and Derivatives Desk increase by 18% YoY

Securities brokerage activities strengthened

ESG risk assessment completed on more than 70% of CIB's loan portfolio

Iceland Funds

28.5% ROE

49.4% Cost-to-income ratio¹

AUM ISK 388bn

Iceland Fund remains a market leader in the fund market for retail clients

Net inflow into asset management products and short-term funds

Allianz Ísland hf. Allianz

139% ROE in 4Q22

43% Cost-to-income ratio

Increased activities resulting in robust results

Net fee & commission income increase by 69% YoY

1. As calculated from the Bank's Consolidated Income Statement.

Sustainability priorities ahead in 2023

Significant sustainability milestones met in 2022

Sustainable lending rose by 36% in 2022

ISKbn

2022 Highlights

Publication of **On the road to net-zero report**

[Report link](#)

76% of the Bank's credit risk exposure² assessed with regards to **ESG risk** (up from 34% last year)

> 30 sustainability related seminars held within the Bank

Sustainability goals for 2023 include¹

Increase the portion of **sustainable corporate loans** in the loan portfolio to **15%**

Perform and report on an initial assessment of **risks and opportunities related to biodiversity**

Publish **net zero sectoral pathways** for seafood, agriculture and construction

Increase share of purchasing from suppliers that have **signed the suppliers' code of conduct** from 45% to >75%

1. Full list of objectives can be found in the annual and sustainability report for 2022. 2. Excluding individual banking and small enterprises which are out of scope.

Financial overview

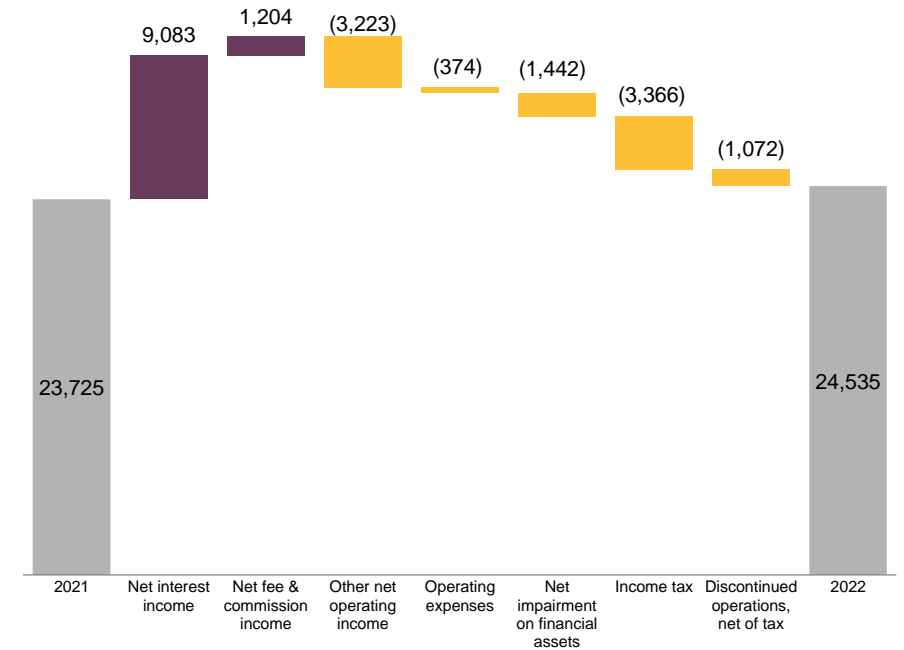

Growth in core income the key driver in strong results

Interest income continues to rise as loan portfolio grows and interest rates rise

Profit for the period – 4Q21 vs 4Q22
ISKm

Profit for the period – 2021 vs 2022
ISKm

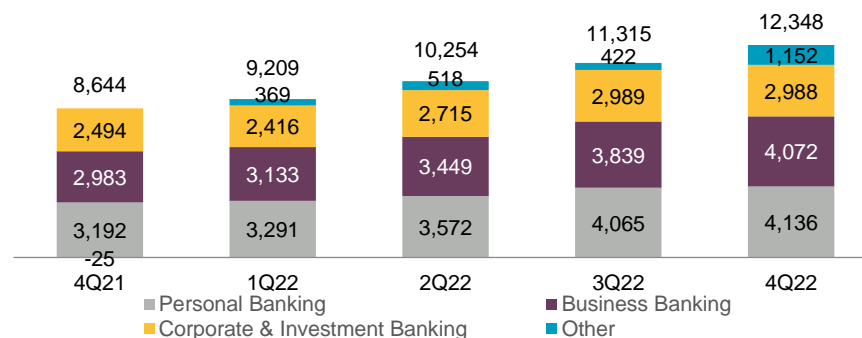

NII increases from larger loan portfolio and higher margins

Central bank rates likely near its peak, although inflation remains high

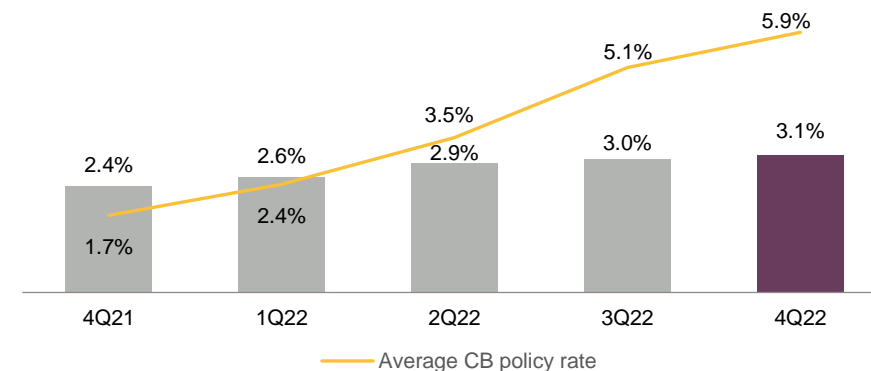

Highlights

- Lending margin was 1.8% in 4Q22 (2.1% in 4Q21) and 1.9% in 2022 (2.2% in 2021)
- Deposit margin was 2.1% in 4Q22 (1.4% in 4Q21) and 1.9% in 2022 (1.2% in 2021)
- Net interest margin was 2.9% in 2022 compared to 2.4% in 2021. Average CB policy rate rose from 1.1% in 2021 to 4.2% 2022

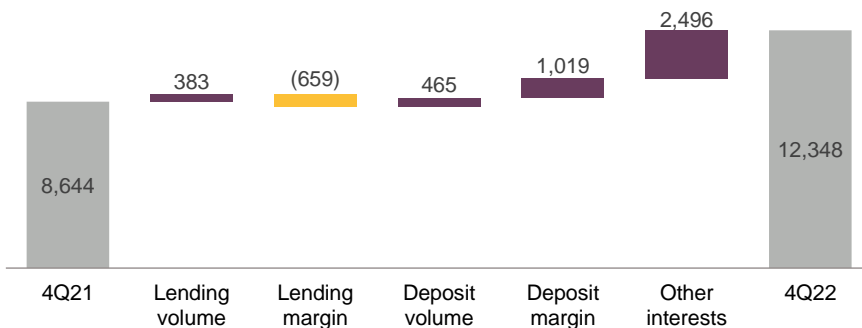

Net interest income By business segments, ISKm

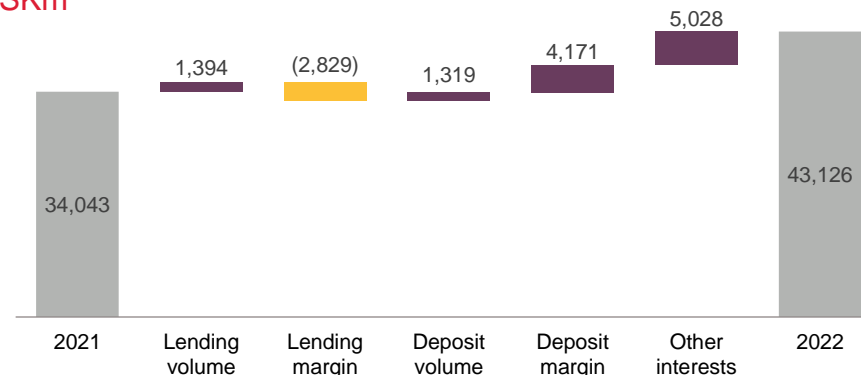

Net interest margin On total assets

NII – comparison 4Q YoY ISKm

NII – comparison YoY ISKm

Rise in income from cards and payment processing continues

Allianz Ísland hf., a subsidiary, had a strong year contributing to rising NFCI

Highlights

- Strong result in Allianz from good sales and performance-based fees in 4Q22
- Income from cards and payment processing expected to have normalised after the COVID-19 related drop
- Reduction in performance-based fees explains the drop in asset management fees in 4Q22 YoY

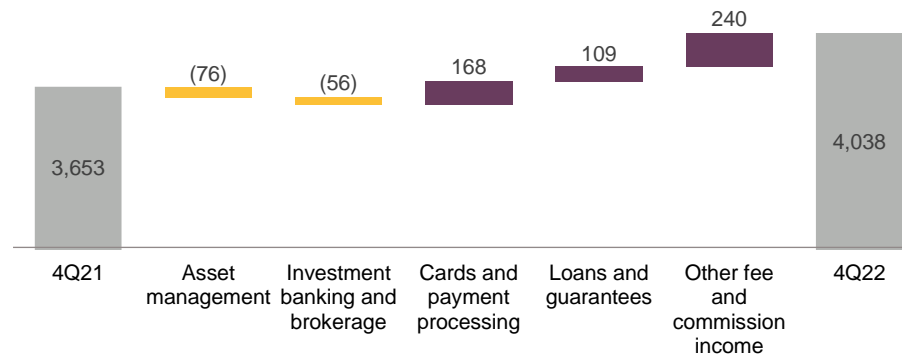

Net fee and commission income Business segments, ISKm

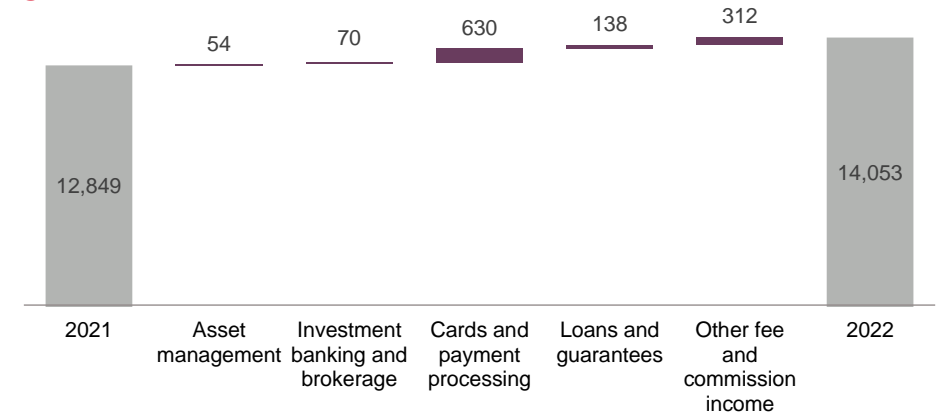

Net fee and commission income By type, ISKm

NFCI – comparison 4Q YoY ISKm

NFCI – comparison YoY ISKm

NFI affected by volatile market environment

Losses in bonds and related derivatives due to rising rates environment

Highlights

- The loss in NFI is largely due to movements in ISK base rate curves
- Negative impact from Debt issued at fair value and related derivatives in 4Q22 due to reclassification of gains from P&L to Other Comprehensive Income (OCI)

Net financial income (expense) ISKm

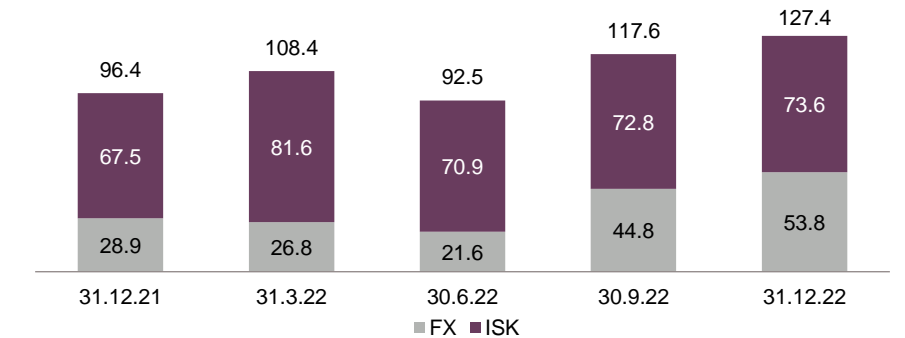

Shares and equity instruments¹ ISKbn

Net financial expense by type in 4Q22 ISKm

Bonds and debt instruments² ISKbn

1. Excluding listed shares and equity instruments used for economic hedging. 2. Excluding listed bonds and debt instruments used for economic hedging.

C/I ratio in 4Q22 below target due to strong income generation

High costs in 4Q22 and ongoing cost pressure in 2023 due to high inflation

Highlights

- The increase in other operating expenses in 4Q22 is resulting from a higher inflation, normalisation of travel and other activities after Covid-19, strategic projects and a provision based on internal estimate for a potential administrative fine (see note 43 on Contingencies in the 2022 financial statements)
- Current inflation levels and wage agreements put pressure on costs in 2023
- Salaries in Q4 unusually high mainly due to retroactive changes to wage agreements and accrued leave

Administrative expenses ISKm

Cost-to-income ratio¹

Administrative expenses – by type ISKm

FTEs period end²

Total assets / FTEs² ISKbn

1. Calculated as (Administrative expenses + Contribution to the Depositor's and Investors' Guarantee Fund – one off items) / Total operating income – one-off items). 2. FTE numbers exclude seasonal employees.

Asset quality continues to improve

Stage 2 loans continue downward trend and have likely reached normalized levels

Highlights

- Uncertainty regarding the impact of the COVID-19 pandemic on credit quality is greatly reduced following a strong tourist season
- The COVID-19 overlay factor has been removed and the transfer to Stage 2 has been reversed in cases where no other indicators have been activated, leaving no additional impairment allowance attributable to the tourism overlay or stage transfer
- The definition of forbearance includes a 24-month probation period. Therefore, loans are classified as forborne even after normal payments have resumed
- The 4Q22 impairment is due to increased inflation and its potential impact on credit quality
- Loans amounting to ISK 27bn are expected to exit forbearance probation in 2023
- Reserve coverage ratio (RCR) for impairment allowance on Stage 3 was 20% at end of 4Q22

Net impairment on financial assets By period, ISKbn

Current and expected cost-of-risk

- Annualised cost of risk was +22bp in 4Q22 (-23bp for 4Q21) and -14bp FY22
- Current impairment outlook relatively benign due to low unemployment and good economic growth outlook
- The probability weights of economic scenarios were kept unchanged at 20% (good), 50% (baseline), and 30% (bad) at the end of 4Q22
- A shift of 5% from baseline to the bad scenario would increase the impairment allowance by ISK 0.3bn while a 5% shift from the baseline to the good would decrease the allowance by ISK 0.16bn
- Current impairment outlook relatively benign due to low unemployment and good economic growth outlook

Loans to customers: Stage 2 and 3 (NPL)

Development of gross carrying amount as ratio of total loans

Performing loans with forbearance

Gross carrying amount, ISKbn

Solid lending growth during the year

Credit quality remains strong, and the loan portfolio is highly collateralised

Highlights

- Robust risk management and conservative lending policies are attributed to the Bank's credit quality remaining strong
- Loans to customers grew 9.1% from year-end 2021. PB has grown by 10.0%, BB by 17.7% and CIB by 2.3%

Loans to customers

By business division, ISKbn

Loans to customers

By sector, with tourism as a separate sector

LTV distribution by underlying asset class

31/12/2022, loan splitting approach, ISKbn

Loans to customers: gross carrying amount

31/12/2022, risk class and impairment stage, ISKbn

Mortgage portfolio resistant to rising rates

Average LTV improves, origination process had built-in buffers for expected rate increases

Highlights

- Conservative payment assessment for non-indexed variable rate mortgages in the low interest environment means that households are well prepared for higher interest rate environment
- At origination, LTV is capped at 80% (85% for first time buyers) and debt service-to-income at 30% (35% for first-time buyers)
- Despite variable NIL mortgage rates have risen by 3.8pp since year-end 2021 there has not been any observable increase in stage 2 or in NPLs

Mortgage portfolio

By interest rate type, gross carrying amount, ISKbn

LTV distribution of mortgages

Gross carrying amount, loan splitting approach, ISKbn

Mortgages portfolio: Stage 2 and 3 (NPL)

Development of gross carrying amount as ratio of total mortgages

Interest rate reset profile for NIL 3-5Y fixed rate mortgages¹

Gross carrying amount, ISKbn

1. NIL stands for non-index linked loans.

Real estate and construction sector in a good shape

Exposures in the real estate sector mostly to companies with diverse portfolios

Highlights

- Loans to real estate companies and construction amount to 16% of loans to customers
- Disciplined origination with conservative LTV requirements and debt service criteria
- Third party security agents for largest clients
- Growth in exposure to construction is expected to continue to rise as the market is in need for new housing
- Over half of exposure in the construction sector is for building apartments, 20% for commercial real estate and the rest is mixed or to general construction contractors

Development of exposures to real estate companies By period, ISKbn

Development of construction exposures By period, ISKbn

Real estate portfolio: Stage 2 and 3 (NPL)

Development of gross carrying amount as ratio of the real estate portfolio

Real estate collateral by type

31/12/2022

Deposits are the largest source of funding

Retail deposits continue to increase

Highlights

- Term deposits are 19% of total deposits
- Deposit concentration is stable. 12% of deposits belonged to the 10 largest depositors and 29% to the 100 largest at 4Q22, compared to 12% and 28% respectively at YE21
- At end of 4Q22, 72% of deposits were in non-indexed ISK, 14% CPI-linked and 14% in foreign currencies

Funding sources

By type, % of total liabilities and equity

Short-term funding → Long-term funding

Customer loans to customer deposits ratio

Development, %

Deposits from customers and credit institutions

Development, by LCR category, ISKbn

Seasoned and diversified long-term funding programme

Issuance of EUR covered bonds and Tier 2 in ISK further diversifies the funding mix

Highlights

- S&P Global ratings BBB/A-2 with stable outlook confirmed on 13 July 2022
- In June, the Bank signed a new covered bond programme. Rated A by Standard & Poor's, and sold its first EUR 300m covered bond in September
- The Bank issued its first Tier 2 in ISK in October 2022, a total of ISK 10.5bn
- In November 2022 the Bank exercised its call option on its SEK 750m Tier 2 of 2027, and tendered EUR 263m of its EUR 300m callable bond maturing January 2024

Sources of borrowings Development, ISKbn

Contractual maturity profile of borrowings 31.12.22, ISKbn

Currency split of borrowings 31.12.22

Sound liquidity management, ratios well above requirements

Liquid assets of ISK 312bn, representing 20% of total assets

Highlights

- All liquidity measures above regulatory requirements
- The Central Bank has announced that at the beginning of 2023 a new rule takes effect with an 80% minimum liquidity ratio in euros
- The Banks EUR LCR at YE22 was 792%

Total liquidity coverage ratio (LCR)

Liquidity coverage ratio – foreign currencies and ISK

Liquid Assets

% of total assets, ISKbn

Net stable funding ratio (NSFR)

Strong capital position

Capital position to be optimised before year-end 2024

Highlights

- At the end of September, the counter-cyclical buffer in Iceland increased from 0% to 2.0% which raised the Bank's overall capital requirement from 17.9% to 19.9%
- Additional AT1 issuance potential of ISK 10bn to optimise capital structure
- An ISK 14bn drop in REA despite an ISK 33bn increase in loans to customers in 4Q22
- The change in REA in 4Q22 is a result of decrease in loans to credit institutions and revision in the application of risk weights for the mortgage portfolio

Capital ratios and leverage ratio

% of REA (% of total exposure for leverage ratio)

Risk exposure amount (REA)

ISKbn

Capital distribution plans

- Dividend payment of ISK 12.3bn proposed to the annual general meeting in line with the Bank's policy of paying out ~50% of preceding year's profit
- ISK 5bn of share buybacks planned over the coming few months through a market-based share buyback program
- Buyback plans for the short term reduced from ISK 15bn to ISK 5bn due to profitable loan growth and market circumstances. The ISK 10bn reduction will be added back to the Bank's capital base
- The Bank plans to optimise its capital structure before year-end 2024

MREL (Minimum Required own funds and Eligible Liabilities) according to BRRD I

Balance sheet reflects a balanced loan and funding profile

Conservative mix of assets and stable funding

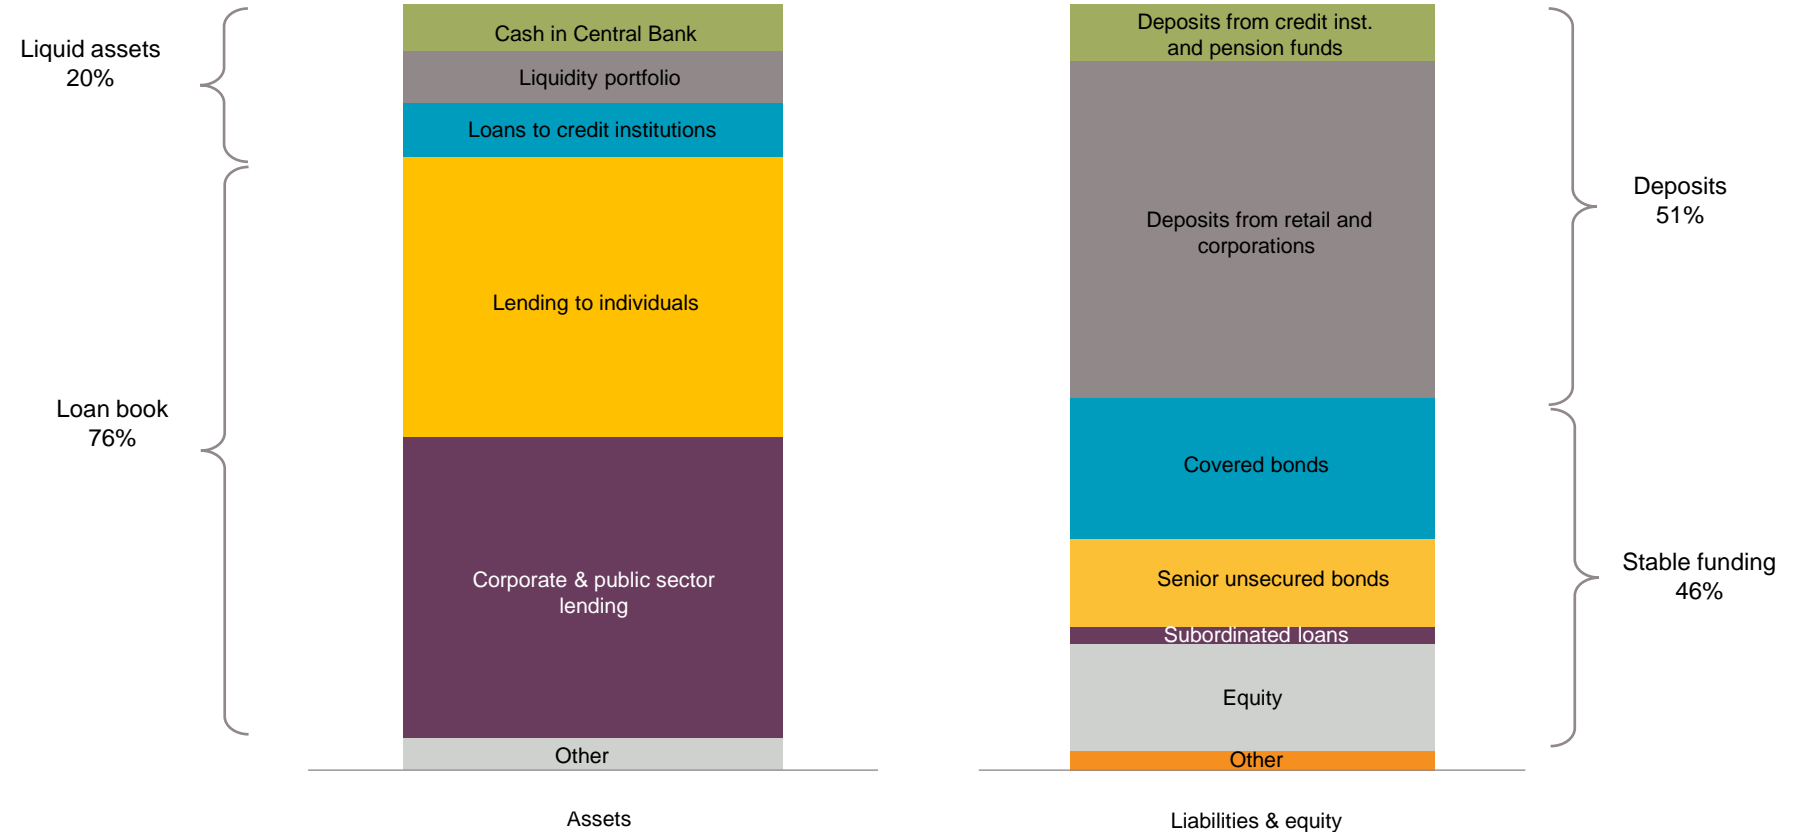

Assets

- Vast majority of assets consist of lending to both retail and corporates
- Strong liquidity portfolio is a consistent factor in balance sheet management
- Very limited exposure to non-liquid or non-lending assets

Liabilities

- Deposits from retail and corporates are the single largest funding source
- Bonds and debt instruments have become a more prominent part of the funding mix thanks to continuous focus on attracting new pockets of demand, including foreign currency and ESG issuance

Simplified balance sheet structure 31.12.2022, ISK 1,566bn

Assets

Strong loan growth in 2022

Appendix II – Icelandic economy update

Forecasts as of 1 February 2023

Steadier growth to take over from the strong recovery

Exports the main driver of GDP growth in 2023, but domestic demand will gain steam in coming years

Highlights

- GDP growth is estimated to have measured 7.0% in 2022, following on from 4.4% growth in 2021
- Demand grew strongly – private consumption in particular. Tourism regained its footing in 2022, and other export sectors contributed to growth as well. On the other hand, imports surged
- ISB Research forecasts GDP growth at 3.4% in 2023. Export growth will be a major contributor to GDP growth in 2023, supported by relatively robust growth in demand, although private consumption growth will lose considerable steam year-on-year
- Output growth at 3.4% is also assumed in 2024, with private consumption and investment gaining pace and export growth softening
- For 2025, the outlook is for GDP growth to slow to 2.9%, owing mainly to weaker growth in exports
- External risk factors include the impact of the continuing war in Ukraine, the effects of high inflation and rising interest rates on trading partner demand, and the impact of a tighter domestic monetary stance as well as developments in the housing market on households and businesses

GDP and contribution of its subcomponents

Volume change from prior year (%)

GDP, domestic demand, and external trade

Volume change from prior year (%)

Tourism rises to new heights

Over 2.1 million tourists to visit Iceland in 2023, followed by record numbers in 2024 and 2025

Highlights

- The tourism industry bounced back swiftly after public health restrictions were lifted last spring. As yet, the worsening economic outlook abroad seems not to have dampened appetite for travel to Iceland to any discernible degree
- Around 1.7 million tourists visited Iceland in 2022, the largest total since 2019
- Bookings, growth in the number of scheduled Iceland-bound flights, and an uptick in cruise ship arrivals all suggest that growth will remain buoyant this year
- ISB Research forecasts that over 2.1 million tourists will arrive via Keflavik Airport this year, about the same number as in 2017
- Tourist numbers are expected to rise to over 2.3 million in 2024 and 2.4-2.5 million in 2025. If this forecast is borne out, the next two years will set new records for the tourism sector
- The slower expected rate of growth in tourist arrivals further ahead is due, among other things, to a shortage of accommodation and other related infrastructure and to the possibility that a rising real exchange rate could cut into demand for Iceland as a travel destination

Number of foreign tourists, by month thousands

Number of foreign tourists, by year thousands

Icelandic economy resilient to European energy crisis

Geothermal heating keeps energy costs at bay

Highlights

- Being a small open economy, the economic impact of the Ukraine war and the resulting energy crisis is felt in Iceland although direct impact on trade is minimal
- However, as a commodity exporting economy with the highest share of renewable energy usage worldwide, Iceland is resilient to the energy crisis and terms-of-trade shock that most other European economies face in the coming winter
- Almost 90% of all housing in Iceland, measured in m³, is heated by geothermal energy and a further 7% is heated by domestically produced electricity
- The cost-of-living shock to European households creates a downward risk to tourism in the coming winter although, so far, the sector has not seen a backlash in demand for coming quarters
- Seafood prices have increased considerably since the onset of the Ukraine war, offsetting the YoY reduction in allowable fish catch for the current season

Share of primary energy from renewable sources % of total

Proportion of energy source in space heating %

Current account deficit set to close during the forecast horizon

Growing exports, better terms of trade, and slower demand growth will help rebalance external trade

Highlights

- The tourism boom explains the bulk of this year's forecasted 8.5% growth in exports as well as the more moderate growth expected in 2024-2025
- Exports of intellectual property and other services look set to grow markedly as well
- Goods exports growth in coming years due to stronger exports of farmed fish, aluminium, and other industrial goods as well as an uptick in groundfish exports
- Last year's estimated current account deficit of 3.2% of GDP reflects the fact that domestic demand picked up more rapidly than exports in the wake of the pandemic as well as worsening terms of trade
- The outlook is for the current account deficit to decline to 1.4% of GDP in 2023 due to improving terms of trade, export growth outpacing import growth and an improvement in the contribution from primary income
- The current account is expected to be broadly balanced in 2024-2025, with the final outcome depending on the real exchange rate and terms of trade

Investment keeps growing steadily in the wake of an upsurge

Residential investment the main driver of growth in 2023; corporate investment set to regain steam

Highlights

- After spiking in 2021, investment growth appears to have lost considerable pace in 2022
- For 2022, growth is estimated at just over 4%, owing entirely to business investment, as both residential and public investment contracted somewhat year-on-year
- For 2023, though, robust growth in residential investment looks set to weigh heaviest in the projected 3% year-on-year growth in total investment, while business investment is on track to be virtually unchanged between years
- The impact of rising interest rates and increasingly muted expectations on business investment is offset by ambitious infrastructure-related projects
- Corporate investment will then pick up again in 2024, and residential investment is expected to grow as well
- In the final year of the forecast horizon, public investment is expected to rebound somewhat, while growth in residential investment looks set to lose momentum
- ISB Research forecasts that total investment will grow by just over 3% in 2023, 4-5% in 2024, and nearly 4% in 2025
- The overall investment level will hold relatively steady over the forecast horizon, although activity will shift between sectors

Investment, real change, and contribution of subcomponents %

Executives' expectations and business investment

Index value (left) and % change year-on-year (right)

Unemployment set to remain flat in 2023

Real wage growth expected throughout the forecast horizon

Highlights

- The labour market has recovered remarkably quickly post-COVID, and job numbers are now above the pre-pandemic level
- Unemployment averaged 3.9% in 2022, close to the 3.6% seen in 2019. In 2020 and 2021, however, it hovered around 8%
- ISB Research forecasts average year-2023 unemployment at 3.3%
- Even though nominal wages rose by over 8% in 2022, they did not compensate for inflation, and real wages were flat during the year
- Real wages are projected to start to grow again as soon as this year, in view of the contracts currently on the table. ISB Research forecasts real wage growth at 1% in 2023 and nearly 2% per year in 2024 and 2025
- Unemployment is expected to remain broadly unchanged throughout the forecast horizon, although it will rise marginally in 2024 as tension in the labour market eases
- ISB Research forecasts average unemployment at 3.7% in 2024 and 3.8% in 2025

Private consumption growth remains resilient

Household saving ratio still above average

Highlights

- Icelanders were willing spenders in 2022. Over the first nine months of the year, private consumption grew in real terms by 11%, the fastest rate in 17 years
- Private consumption growth appears to have eased in Q4/2022, and the growth rate for the full year is estimated at approximately 9%
- The saving ratio topped out at 23% of disposable income in Q2/2022. It is still above average, measuring around 13% of disposable income, but has begun to ease towards its average level
- This could suggest that private consumption growth will lose momentum in the near future
- Other indicators, such as payment card turnover, point in the same direction. After several record-breaking months in 2022, payment card turnover has begun to ease
- Private consumption is quite resilient, and most households are still well positioned financially
- ISB Research forecasts year-2023 private consumption growth at 2.5%. Alongside declining inflation and the associated real wage gains, private consumption will grow by 2.9% in 2024 and 2.7% in 2025

Inflation will fall, but how fast?

The road back to the inflation target is rocky and circuitous

Highlights

- Twelve-month inflation rose in January and measured 9.9%, where it topped out last July
- In coming months something major would have to change in order to prevent inflation from subsiding in the near future, as large monthly increases are set to drop out of twelve-month measurements
- For example, the CPI rose by an average of 1% per month over the first half of 2022
- Of the January inflation figure of 9.9%, the housing component accounts for 3.5%. This percentage has been falling, after peaking at 4% last summer, and looks set to keep declining in the near future
- Imported inflation, another key driver of inflation, is still rising and appears likely to keep doing so in coming months
- There are hopes that it will taper off sharply over the course of the year, though, particularly if the ISK holds its ground
- ISB Research expects inflation to average 7.6% in 2023, 4.5% in 2024, and 2.8% in 2025

Inflation and the CBI inflation target

Inflation by contribution of main categories

Interest rates relatively high near-term but will ultimately fall

Gradual easing further ahead; equilibrium rate in sight by the end of the horizon

Highlights

- The CBI began raising interest rates in spring 2021, in response to the worsening inflation outlook and improving economic outlook. The policy rate is now 6.0%, after being raised by 4 percentage points in 2022
- The real rate has risen somewhat in recent quarters. It currently ranges between -2% and just under 2% in terms of forward-looking measures. The long-term real rate is around 1.9%, however, up from slightly below 1% in mid-2022
- The outlook is for a further 0.5 percent rise in the policy rate and for the Central Bank's rate hike process to conclude with the policy rate at 6.5% by the end of Q1
- Further ahead, however, the policy rate will fall again, perhaps starting in Q4 – provided that inflation subsides as expected
- The policy rate is assumed to average 4.5% in 2025, the last year of the forecast horizon
- By the end of the forecast horizon, long-term rates are expected to approach equilibrium, estimated at around 4.5% for nominal rates and somewhere near 1.5% for the real rate

Policy rate and inflation

%, Real policy rate in terms of average expected policy rate and inflation over the coming 12 months

Interest rates

%

ISK likely to strengthen somewhat over time

Less favourable net trade reduces the likelihood that the ISK will regain its previous strength

Highlights

- After strengthening markedly over the first five months of last year, the ISK fell steadily from early summer until the year-end. On average, the ISK was 3% stronger in 2022 than in 2021
- Increases in long-ISK forward positions were a factor in the appreciation early on and reversals in such positions played a role in the subsequent depreciation
- Unfavourable foreign trade and foreign asset purchases by domestic pension funds also played a role in ISK depreciation in 2H 2022
- The near-term outlook for external trade has deteriorated somewhat relative to earlier forecasts, and the tailwinds supporting the ISK will probably be weaker in coming quarters than earlier anticipated
- Even so, the current account looks set to be in balance further ahead, with a significant interest rate differential, a strong external position, more favourable GDP growth prospects than are generally envisioned abroad, and non-residents' securities holdings are relatively moderate
- ISB Research forecasts that the ISK will be approximately 8% stronger at the end of the forecast horizon than at year-end 2022. This would give an exchange rate of roughly ISK 142 per euro towards the end of 2025

Iceland's credit rating has been resilient in turbulent times

Rating companies acknowledge the flexibility of the economy and resilience to the pandemic shock

Development of sovereign credit rating

MOODY'S IN JANUARY 2023

- “The credit profile of Iceland is underpinned by its wealthy and flexible economy with favourable demographics that support its long-term growth prospects.”
- “The country has built significant buffers which help offset its vulnerability to shocks given its small size and concentration in a limited number of sectors.”
- “The pandemic-induced fiscal deterioration is being gradually reversed helped by strong economic growth.”

FITCH IN OCTOBER 2022

- “Iceland's ‘A’ rating is driven by its very high income per capita and very strong governance and human development indicators that are more consistent with those of ‘AAA’ and ‘AA’ rated countries.”
- “A favourable demographic composition (the share of people of working age was 65% in 2020) supports growth potential.”
- “The rating is constrained by the high, but declining, public debt burden, the small size of the economy and limited export diversification, which result in vulnerability to external shocks and balance of payments risks.”

S&P IN NOVEMBER 2022

- “The Russia-Ukraine conflict has had only a limited impact on Iceland's economy. Iceland has minimal direct trade links with Russia and Ukraine and is largely energy independent.”
- “The government is speeding up its fiscal consolidation strategy, following two years of sizable deficits during the pandemic.”
- “External pressures appear manageable, especially given Iceland's net external creditor position and large foreign exchange reserves.”
