

4Q25 Financial Results

12 February 2026

Jón Guðni Ómarsson
Chief Executive Officer

Ellert Hlööversson
Chief Financial Officer

Core operating income for fourth quarter grew by 14.4% year-on-year

Strong growth in all revenue streams

ROE in excess of financial targets
ROE

C/I well below target of being <45%
C/I ratio^{1,2}

Considerable excess capital (ISK 32 billion) in place
Total capital ratio³

1. C/I ratio for 4Q25 excludes salary expenses of ISK 804m due to early retirement of employees and an income of ISK 237m within net interest income (ISK 550m reversed from charge in 3Q25 due to provision for legal proceedings and a charge of ISK 313m due to correction from previous years. C/I ratio for 3Q25 excludes a charge of ISK 550m due to provision for legal proceedings. C/I ratio for 2025 excludes ISK 804m in salary expenses and a charge of ISK 313m within net interest income. 2. Income of ISK 119m in 2024 recognized in "Profit (loss) from non-current assets held for sale, net of tax" has been restated in the line item "Other operating income" and "income tax" and C/I ratio has been restated accordingly. 3. Including 3Q25 profit for 30.9.25.

Updated medium term financial targets

Solid performance and opportunities within the current operations support path to updated targets

	Updated Target	4Q25	2025	Previous Target
Return on equity	>13%	10.5%	11.2%	>10%
Cost-to-income ratio	<43%	43.5%	42.4%	<45%
CET1 excess	100-300bps	510bps	510bps	100-300bps
Dividend-payout-ratio	50%			50%

Employee incentive scheme

-  Changes to remuneration policy approved by shareholders in June 2025 allowing for elements of variable pay
-  **Employee Stock Option Plan** implemented in 3Q25
-  **Employee Incentive Scheme** implemented in early February – financing of scheme contingent upon ROE reaching lower end of accrual range
-  ROE accrual range for funding of incentive scheme 11-12.5% for 2026

2026 Guidance

-  **ROE in 2026** expected to be ~12% for the year as a whole, assuming normal level of impairments
-  **C/I ratio** expected to be ~43% in 2026
-  Loans to customers and revenue, in general **to grow** in line with nominal GDP through the business cycle while international lending provides additional growth

GDP growth weak in 2026 but set to gain steam later on

Temporary period of sluggish growth due to export sector setbacks and high real interest rates

New business cycle, subdued growth following contraction...
Real GDP and main subitems, YoY change, %

..and housing market still remains quite resilient in the face of high real rates
Year-on-year increase in residential house prices and housing market activity

Inflation persistent in the near term but likely to eventually subside ...
MoM CPI change (% , left axis) and 12m trailing inflation(% , right axis)

... and the Central Bank is expected to continue cutting rates in 2026
CBI policy rate and real policy rate, %

Strong performance across all business units

Personal Banking

Growth in deposits ISK 38.5 billion in 2025 or 8% from end of 2024 and 4% loan growth in 2025

Return on equity was 15.2% and cost-to-income ratio 51.1% in 2025

Core income grew by 12.4% in 2025 compared to 2024

Almost 400,000 Personal Banking visits to Íslandsbanki branches in 2025

ISK 258 million worth of disputed payments successfully settled and recovered

Business Banking

Loan growth in 2025 was 7% and deposits increased by 4%

New lending in Business Banking in 2025 amounted to ISK 128 billion and refinancing ISK 24 billion

Return on equity was 16.7% and cost-to-income ratio was 40.2% in 2025

Highest market share amongst SMEs with 37% overall market share and 41% within the capital area¹

Sustainable loans counted for 16% of the BB loan portfolio at end of 2025

Corporate & Investment Banking

Return on equity was 12.3% in 2025 and cost-to-income ratio was 39.0%

New lending within CIB in 2025 ISK 110 billion and refinancing ISK 62 billion

Project pipeline in Corporate Finance is strong and important milestone projects completed in 2025

8% increase in new clients in Asset Management and 8% in new asset under management

A balance between digital solutions and personalised services

Personal Banking seeks to meet our customers' needs through proactive engagement

Capital optimisation an ongoing priority for the Bank

Combination of dividends and buybacks distribution to shareholders in 2025 amounted to >100% of 2024 profits

Capital distribution 2021-2026E, ISKbn

- Payment of **ISK 12.6 billion** to be proposed to 2026 AGM in accordance with dividend policy
- Own shares at **year-end 2025** amounted to **5.35%** of issued share capital
- New **ISK 15 billion** authorisation obtained in February 2026 from the FSA
- Íslandsbanki **will seek renewal** of authorisation from AGM to buy back own shares and to reduce share capital through cancellation of own shares

Financial Overview

4Q25 improving year on year aside from one-off effects

Higher quality of earnings as profits as higher portion of profits stems from core income

Profit for the period – 4Q24 vs 4Q25
ISKm

Profit for the year – 2024 vs 2025
ISKm

Adjustments in 4Q25

- ISK 237m of net interest income related to reversal of provision related to a supreme court ruling and interest expense relating to previous accounting periods
- ISK 804m of one-off salary related costs

Adjustments in 2025

- ISK 313m of net interest income related to interest expense relating to previous accounting periods
- ISK 804m of one-off salary related costs

NIM uplift year-on-year as impact of imbalances reduces

Inflationary ticks in 4Q25 close to zero adversely impacts both net interest income and margin

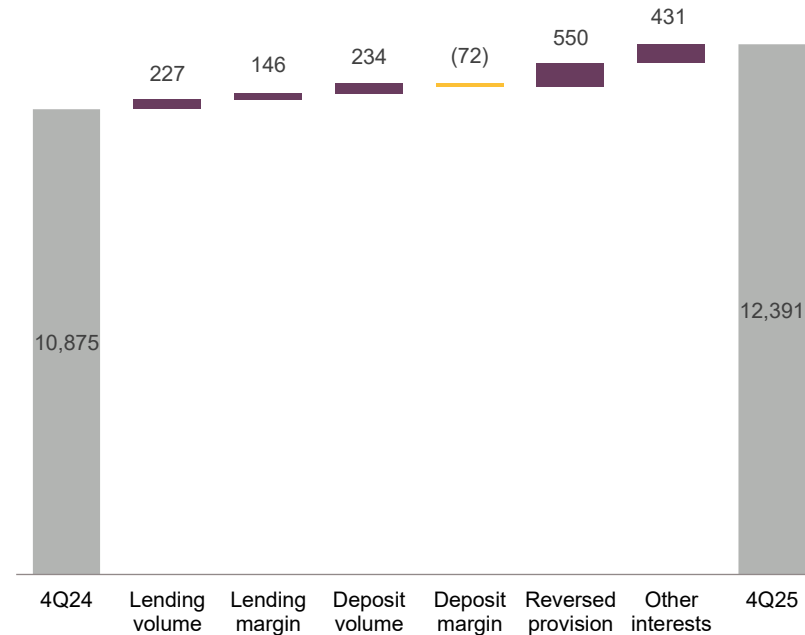

Net interest income
Business segments, ISKm

Net interest margin
On total assets

Net interest income – YoY comparison
ISKm

Highlights

- Net interest margin was 2.9% in 4Q25 (2.7% in 4Q24), while net interest margin for 2025 was 3.1%
- Accounted within other interest are among other effects of CPI adjustments of the loan book and other items
- The CPI imbalance grew in the quarter and amounted to ISK 200 billion at end of 4Q25, up from 182 billion at end of 3Q25 related to maturity dates of IRS'
- Aggregated inflationary ticks for 4Q25 was 0.09% compared to 1.01% in 3Q25 and 0.14% in 4Q24
- Expectations are that aggregated inflationary ticks for 1Q26 will be 2.23% - considerably higher than 1.04% in 1Q25
- CB policy rate were lowered by 25 basis points in November
- Related to a Supreme Court ruling on variable nominal mortgages in October 2025, ISK 550 million were provisioned in 3Q25 through NII, while reversed in 4Q25 – net zero effect on 2025 as a whole

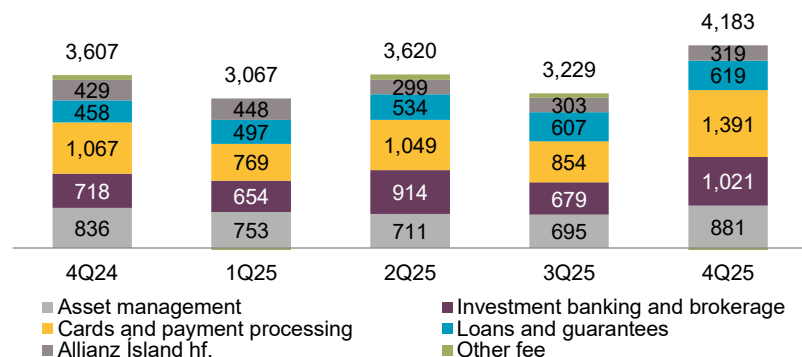

Net fee and commission income with a strong growth from previous year

Increased activity in capital markets and card related performance fees provide considerable uplift year on year

Net fee and commission income
Business segments, ISKm

Net fee and commission income
By type, ISKm

Net fee and commission income – YoY comparison
ISKm

Highlights

- Net fee and commission income with a 16.0% growth year-on-year – net fee and commission income for 2025 as a whole growing by 7.4% year-on-year
- Cards and payments remain the largest fee income stream - considerable growth from previous years mainly explained by higher performance-based fees from MC
- Recovery and increasing volume in capital markets further strengthened growth in both asset management and investment banking and brokerage in the quarter

Fair value adjustments positively impacts other operating income

Market risk exposure remains a small part of the Bank's operations

Net financial income (expense)
ISKm

Shares and equity instruments¹
ISKbn

Highlights

- Net financial income of ISK 404 million was recorded in the quarter, mainly attributable to gains on bonds as well as through economic hedges
- Other operating income amounted to ISK 447 million, mainly related to share of profit of associates
- Equity market risk continues to be limited in size compared to the overall balance sheet of the Bank in line with the Bank's strategy

Other operating income and net FX gain
ISKm

Bonds and debt instruments²
ISKbn

1. Excluding listed shares and equity instruments used for economic hedging.

2. Excluding listed bonds and debt instruments used for economic hedging.

Strong cost-to-income ratio during the quarter

Results continue to be within the Bank's financial targets

Administrative expenses
ISKm

Cost-to-income ratio¹

Highlights

- One-off costs related to dismantling of early retirement scheme amounting to ISK 804 million adversely impacting salaries in 4Q25 compared to previous year
- Dismantling of early retirement scheme unlocks yearly savings and reduces FTEs
- Adjusted for this one-off expense, salaries grew by 4.1% year-on-year
- Other operating expenses increased by 13.2% between years and 3.3% YTD between years, mainly attributable to IT related expenses
- The cost-to-income ratio was 43.5% during the quarter and 42.4% for the year, excluding one-off items - both within financial target
- Unadjusted C/I ratio is 43.8% for 2025 and 47.5% for 4Q25

Administrative expenses – by type
ISKm

Administrative expenses – YoY comparison
ISKm

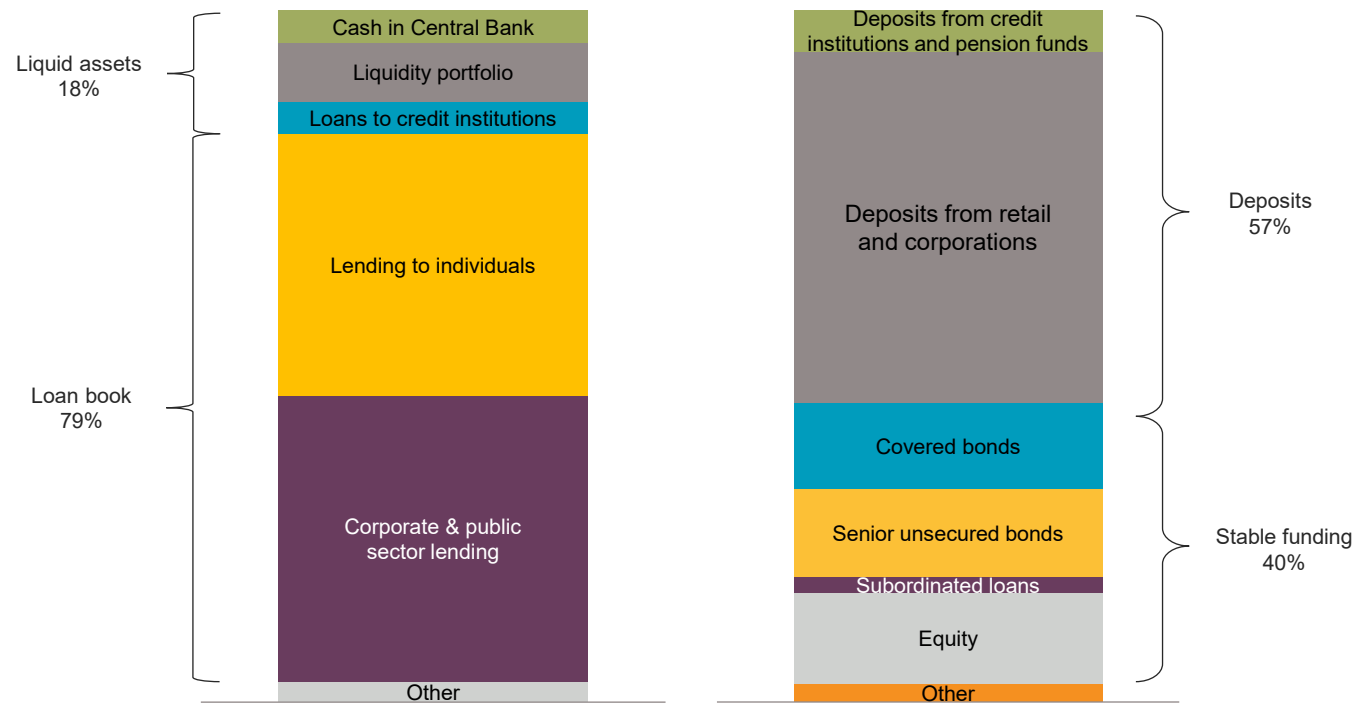

1. C/I ratio for 4Q25 excludes salary expenses of ISK 804m due to early retirement of employees and an income of ISK 237m within net interest income (ISK 550m reversed from charge in 3Q25 due to provision for legal proceedings and a charge of ISK 313m due to correction from previous years). C/I ratio for 3Q25 excludes a charge of ISK 550m within net interest income due to a provision for legal proceedings.

Balance sheet reflects a balanced loan and funding profile

Well diversified funding structure as well as loan book with limited market risk exposure

Simplified balance sheet structure
31.12.2025, ISK 1,728bn

Assets

- Vast majority of assets consist of lending to both retail and corporates
- Strong liquidity portfolio is a consistent factor in balance sheet management
- Very limited exposure to non-liquid or non-lending assets

Liabilities

- Deposits from retail and corporates are the single largest funding source
- Bonds and debt instruments have become a more prominent part of the funding mix thanks to continuous focus on attracting new pockets of demand, including foreign currency and ESG issuance

Growth in loan book on 4Q25 mainly attributable to international activities

Shift between mortgage products normalising – effect of fixed rate imbalance has subsided

Loans to customers

By business division, ISKbn

Loans to customers

By sector, with tourism as a separate sector

Highlights

- Credit exposure fully covered by collateral is ISK 1,283 billion or 94% of loans to customers
- Composition of the loan portfolio comparable to previous quarters
- Around 94% of the loan book are covered by collateral – comparable to previous quarters
- The credit quality of assets continues to be robust due to strong risk management practices and disciplined lending policies
- Low and stable LTV across all types of securities – LTV for the mortgager book remains at 54%, same as 4Q24
- In 3Q25, following a ruling by the Supreme Court of Iceland in a case concerning variable interest rates on a non-index linked mortgage, the Bank recognised a provision of ISK 550m due to potential claims
- As further rulings in cases relating to other lenders have been rendered, the Bank has reassessed its position and reversed the aforementioned provision in 4Q25, resulting in no net impact on profit for the year 2025

Mortgage portfolio

By interest rate type, gross carrying amount, ISKbn

LTV distribution by underlying asset class

Loan splitting approach, ISKbn

NPLs remain both strong and stable, consistent with historical quarters

Increase in Stage 2 loans due to a handful of credit cases, mainly in the construction sector

Net impairment on financial assets

By period, ISKbn

Loans to customers: Stage 2 and 3 (NPL)

Development of gross carrying amount as ratio of total loans

Highlights

- Annualised cost of risk was 32bps in 4Q25 (-11bps for 4Q25) – normalized cost of risk assumed 20-25bps through the business cycle
- The impairment allowance for a few distressed credit cases was increased in the quarter predominantly related to a single credit case coming into foreclosure
- Unchanged weights of economic scenarios; 20% good, 50% baseline and 30% bad.
- NPLs remain stable across the portfolio, for both corporates and mortgages
- As sale time of new residential real estate has both growth considerably through the year and remained high, a handful of construction projects have been classified on stage 2

Performing loans with forbearance

Development of gross carrying amount as ratio of total loans

Mortgages portfolio: Stage 2 and 3 (NPL)

Gross carrying amount as ratio of total mortgages

Deposits growth moderates with lower rate environment

Reduction in wholesale funding offset by growth in retail deposit base.

Funding sources

By type, % of total liabilities and equity

Customer loans to customer deposits ratio

Development, %

Deposits from customers and credit institutions

Development, by LCR category, ISKbn

Highlights

- Overall deposits levels fell by 4% in 4Q25, mainly driven by strategic reduction in wholesale deposits
- Continued growth in deposit by individuals, which grew by 2.9% in 4Q25
- For 2025, deposits grew by 4.6% while deposit by individuals grew by 7.9%
- Term deposits were 17% of total deposits at the end of 4Q25, comparable to historical quarters
- 70% of deposits held by individuals (and 47% of all deposits) are covered by the deposit guarantee scheme

Strong liquidity position paves the way for growth and distributions

Liquid assets 18% of the total balance sheet and fully marked-to-market

Total liquidity coverage ratio (LCR)

Liquidity coverage ratio for ISK

Highlights

- All liquidity measures well above regulatory requirements
- The Bank's EUR LCR at the end of 4Q25 was 733%
- The Bank's securities portfolios are all MtM (FVTPL and FVOCI). There is no unrealised loss due to HtM (amortised cost)
- IRRBB is carefully monitored and managed. The Bank is fully compliant to the supervisory outlier tests

Liquid assets

% of total assets, ISKbn

Net stable funding ratio (NSFR)

Constructive funding markets in 2025

Good diversification of funding sources across products and maturities, as well as across investor types and locations

Highlights

- The Bank's wholesale borrowing split remains evenly divided between ISK and foreign currencies
- Domestically in 2025, the Bank sold ISK 23 billion of ISK denominated covered bonds and ISK 9 billion of ISK denominated senior preferred bonds
- The Bank issued two green senior preferred EUR 300m bonds in 2025, including its longest to date; a 7-year maturity with a 3.50% coupon, corresponding to a spread of mid swaps +130bps
- The Bank continued its capital optimisation with the issuance of AT1 in November; SEK 700m and NOK 200m
- Limited maturities in foreign currencies throughout 2026 allow the Bank to remain an adaptive issuer
- AT1s amounting to SEK 388m is expected to be called this September – refinancing will be subject to the Bank's capital position and market conditions around the call date
- In November, Moody's Ratings affirmed Islandsbanki's A2 long-term deposit and A3 long-term issuer ratings, with a stable outlook

CRR 3 had a significant positive effect on REA

CET1 ratio boosted by 1.6 percentage points

- CRR 3 was enacted into Icelandic law in December 2025 and has had a notable impact on Íslandsbanki's REA and capital ratios.
- The new more risk sensitive standardised approach for credit risk had the largest impact along with the new standardised approach for credit risk.
- REA would have been ISK 1.122 billion according to CRR 2, but is ISK 1.034 billion under CRR 3, an ISK 88 billion (7.8%) reduction in REA.
- The Bank had previously indicated that the adoption of CRR 3 would lower the REA by 6-7%. A prudent estimation of the operational risk REA in the previous quarter explains most of the jump to 7.8%
- Largest change comes from the residential real estate portfolio where a 20% risk weight is now applied to loans up to 55% LTV compared to a 35% risk weight up to 80% of LTV. With an average LTV of 54%, this significantly lowered the REA.
- A new asset class for loans secured with income producing real estates (IPRE) has been introduced in CRR 3, with lower risk weights for lower LTV's has further decreased the REA.
- Land acquisition, development and construction exposures (ADC) are assigned a 150% risk weight in the updated regulation, apart from exposure to residential property where the obligor has more than 20% equity at risk, which rarely applies in the Banks construction portfolio.
- Updates to the Market risk approach have been postponed until 2027. Assuming that the Bank adopts the simplified standardised approach the REA for market risk would increase from ISK 4 billion to ISK 13 billion.

Changes in REA and capital ratios

ISKbn

	CRR 3	CRR 2	Difference	%Diff.
Credit risk	940	1,007	-67	-7%
Market risk and CVA	5	5	0	5%
Operational risk	89	110	-22	-20%
Total Risk Exposure Amount	1,034	1,122	-88	-7.8%

CET1 Ratio	20.1%	18.5%	1.6%
Capital ratio	24.0%	22.1%	1.9%

REA 31.12.2025 - Bridge from CRR 2 to CRR 3

ISKbn

Íslandsbanki's capital ratios well above target

The implementation of CRR 3 provided additional capital optimisation capacity as CET1 ratio was boosted by 1.6 percentage points

Current regulatory requirements and minimum capital target

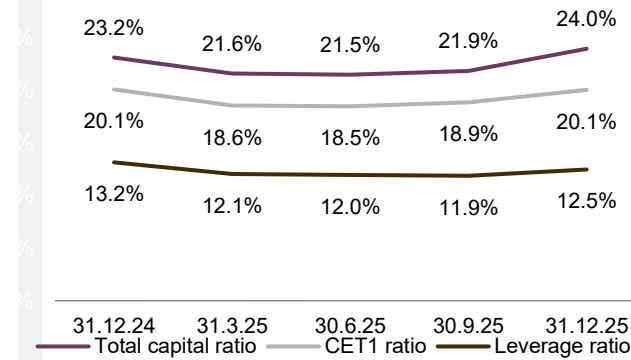

31.12.2025, by capital composition

¹CET1 capital target set at mid-point of management buffer

Capital and leverage ratios

% of REA (% of total exposure for leverage ratio)

REA and REA ratio

ISKbn and % of total assets

Highlights

- The implementation of CRR 3 led to 7.8% decrease in REA, thus increasing the capital ratio by 1.9 percentage points and CET1 ratio by 1.6 percentage points.
- As of 30 June 2025, the Bank must maintain a total SREP capital requirement of 9.4%, on top of which a combined buffer requirement of 9.7% is placed – resulting in an overall capital requirement of 19.1% and capital target of 20.1-22.1% assuming a 100-300bp management buffer.
- As of 31 December 2025, total excess CET1 capital (including uncompleted buybacks at the reporting date) amount to around ISK 36 billion of which ISK 4 billion have been used for share buybacks year to date 2026.
- Beginning of January, ISK 15 billion were approved by the FSA to be allocated to buybacks, and deducted from the capital base in 1Q26
- The Bank remains committed in its efforts to optimise its capital structure through both growth, as well as through distributions to shareholders and expects to conclude capital optimisation through 2026.

Updated Financial Targets

**ROE
>13%**

Solid performance

- ROE 11.2% for 2025
- NII up 13.9% and NFCI up 16%

Opportunities

- Ample capital reserves
- Capital optimisation still at forefront

**Excess CET1
ISK 36 billion**

Íslandsbanki's MREL requirement

A new resolution plan approved for the Bank on 17 October 2025

Minimum Requirement for Own Funds and Eligible Liabilities (MREL), 31.12.2025

$MREL = RCA + LCC = 2 \times (P1 + P2)$

MREL Development, %

- The Icelandic Resolution Authority approves annually a resolution plan for the Bank. The Resolution plan stipulates that the MREL requirement for Íslandsbanki is the sum of the Loss absorption amount (LAA) and Recapitalisation amount (RCA), both equal to the total SREP capital requirement in force at the date of approval (9.4%), resulting in an MREL requirement of 18.8% of REA.
- CET1 capital that is maintained to meet the combined buffer requirement can not be used to fulfil MREL, therefore the effective requirement can be monitored as 28.5%

Non-performing loans (NPL) ratio ¹	1.5%	1.6%			1.6%		

Growth in loan book mainly attributable to international activities

Outlook for a softer domestical loan growth in the short term as the economy cools

Loans to customers

By business division, ISKbn

Loans to customers

By sector, with tourism as a separate sector

Highlights

- Composition of the loan portfolio comparable to previous quarters
- Around 94% of the loan book are covered by collateral – comparable to previous quarters
- The credit quality of assets continues to be robust due to strong risk management practices and conservative lending policies

LTV distribution by underlying asset class

Loan splitting approach, ISKbn

Loans to customers: gross carrying amount¹

Risk class and impairment stage, 31.12.2025, ISKbn

1. Risk class distribution at YE24 shown as comparison

NPLs remain both strong and stable, consistent with historical quarters

Increase in Stage 2 loans due to a handful of credit cases, mainly in the construction sector

Net impairment on financial assets By period, ISKbn

Loans to customers: Stage 2 and 3 (NPL)

Development of gross carrying amount as ratio of total loans

Highlights

- The impairment allowance for a few distressed credit cases was increased in the quarter predominantly related to a single credit case coming into foreclosure
- As time on market for new residential real estate has grown considerably through the year, a handful of construction projects have been classified on stage 2
- The definition of forbearance includes a 24-month probation period. Therefore, loans are classified as forbore even after normal payments have resumed

Current and expected cost-of-risk

- Annualised cost of risk was 32bps in 4Q25 (-11bps for 4Q24)
- The probability weights of economic scenarios were kept unchanged at 20% (good), 50% (baseline), and 30% (bad) at the end of 4Q25. The weights were last changed at end of 1Q22
- A shift of 5% from baseline to the bad scenario would increase the impairment allowance by ISK 220 million while 5% shift from the baseline to the good would decrease the allowance by ISK 90 million

Performing loans with forbearance

Development of gross carrying amount as ratio of total loans

Shift between mortgage products normalising

Adverse impact of fixed rate imbalance has subsided from the mortgage book, in line with expectations

Mortgage portfolio

By interest rate type, gross carrying amount, ISKbn

Interest rate reset profile for NIL 3-5y fixed rate mortgages

Gross carrying amount, ISKbn

Highlights

- In 3Q25, following a ruling by the Supreme Court of Iceland on variable nominal mortgage rates, the Bank provisioned ISK 550m due to potential claims
- As further rulings on cases have been rendered, the Bank now believes that potential reimbursements are unlikely and has reversed the aforementioned provision.
- Nevertheless, the Bank has made adjustments to its product offering following the rulings to ensure that its products are suitable for the needs of the market

LTV distribution of mortgages

Gross carrying amount, loan splitting approach, ISKbn

Mortgages portfolio: Stage 2 and 3 (NPL)

Gross carrying amount as ratio of total mortgages

Slower real estate market transpires into the construction portfolio

Stage 2 portions growing between quarters while NPLs remain stable

Development of exposure to real estate companies

Gross carrying amount by period, ISKbn

Development of construction exposure

Gross carrying amount by period, ISKbn

Highlights

- Loans to real estate companies and construction amount to 10% and 7% of loans to customers, respectively
- Over half of exposure in the construction sector is for residential real estate where sale time of residential real estate has grown throughout the year and remains high – resulting in increasing uncertainty on the sector
- Real estate companies naturally hedged in cash flow as both rental agreements and financing are both long-term and primarily CPI linked.
- High occupancy ratio of the listed commercial real estate companies of around 95%

Real estate portfolio: Stage 2 and 3 (NPL)

Gross carrying amount as ratio of the real estate portfolio

Real estate collateral by type

Liabilities and equity

Deposits continue to be the largest source of funding

Energy consumption by source, 2022

Public debt remains sustainable after pandemic

General govt. gross financial liabilities, % of GDP

Export base has grown more diverse over time

Export contribution by industry

Net international investment position has changed

% of GDP

GDP growth weak in 2026 but set to gain steam later on

Temporary period of sluggish growth due to export sector setbacks and high real interest rates

GDP and contribution of its subcomponents

Volume change from prior year (%), annual data

GDP and contribution of its subcomponents

Volume change from prior year (%), quarterly data

Highlights

- GDP contracted by 1.2% in 2024, ending a short period of strong growth.
- Growth resumed in 2025, supported by strong private consumption, rising investment, and slight export growth. Full-year growth projected at 1.3%, though net trade again weighed on overall performance.
- GDP growth is expected to slow sharply to 0.6% in 2026, reflecting setbacks in several export sectors and the impact of high real interest rates.
- A recovery is projected for 2027–2028, with GDP growth rising to 2.8% in 2027 and 3.0% in 2028 as exports strengthen, investment growth resumes and monetary conditions ease.
- Significant downside risks remain, including potential declines in tourism, geopolitical disruptions, seismic activity on the Reykjanes peninsula, and delays in energy procurement.
- A housing market downturn or more persistent inflation could further restrain domestic demand.
- Productivity gains from AI adoption and increased intellectual-property-driven value added could provide more support to long-term growth than currently assumed, offering a potential upside scenario.

Tourism to languish while other export sectors blossom

Intellectual property and aquaculture will drive export growth, with legacy export sectors lagging behind

Highlights

- Tourism showed mixed performance in 2025, with strong summer arrivals offset by a sharp decline in the low season. Overall tourist numbers were virtually unchanged from 2024.
- A contraction is expected in 2026, with timely indicators pointing to continued YoY declines through spring. Peak-season conditions look steadier, but full-year tourist numbers are projected to fall nearly 4%.
- Tourism growth is expected to resume slowly in 2027–2028
- While tourism and some traditional export industries are likely to shrink in 2026, several other export sectors are expanding. These include land-based aquaculture, which is set for steady growth in export value.
- Exports of intellectual property products have been rising rapidly, generating an estimated ISK 288bn in 2025, or over 14% of total export revenues.
- The intellectual property sector spans diverse firms, including medical equipment producers, content creators, and game developers.
- Strong pharmaceuticals activity and major data-centre developments are expected to substantially boost revenues in the coming years.

Modest current account deficit over the forecast horizon

Improving terms of trade offset the contraction in exports in 2026

Imports and contribution from subcomponents
% change

Current account balance
% of GDP

Highlights

- Imports are projected to shrink by nearly 2% in 2026, reversing strong growth in 2025. The slowdown reflects the winding down of large data-centre investments and reduced imports of rental cars and equipment.
- Import growth will resume as economic activity strengthens, but exports are expected to outpace imports, resulting in a positive net trade impact on GDP growth in both 2027 and 2028.
- The current account has been in deficit since 2021, the deficit widening further in 2025 to 3.5% of GDP despite a strong services surplus.
- Data-centre-related equipment imports account for a significant share of the goods deficit, but these are fully financed by foreign owners and clients.
- The deficit is projected to improve to 1.1% of GDP in 2026–2027 and 1.0% in 2028, supported by better terms of trade and stronger export performance.
- External risks include ISK appreciation and a deeper-than-expected tourism downturn, either of which could delay improvement in the trade balance.
- Iceland’s net external asset position—ISK 2,101bn (43% of GDP) as of September 2025—facilitates improved FX stability and limits the risk of disruptive capital flows.

ISK likely to weaken gradually

The high real exchange rate is a growing challenge, making ISK depreciation likely further ahead

ISK exchange rate

Major currency exchange rates against the ISK and index values

ISK exchange rate and real exchange rate

EURISK levels and indices

Highlights

- The ISK has shown exceptional stability since the pandemic, with the trade-weighted index nearly unchanged in 2023–2024.
- In 2025, it appreciated by 1.5%, despite notable intrayear volatility. Bilateral currency movements varied significantly: the ISK weakened slightly against the EUR but strengthened 10% versus the USD and nearly 4% against the GBP, reflecting divergent global currency trends.
- Among the factors supporting the ISK despite a sizeable CA deficit were relatively favourable underlying FX flows, limited forward FX sales during the strong tourist season, muted pension-fund FX purchases, and increased FX borrowing by firms.
- Supportive conditions will persist, with a narrowing CA deficit, strong international investment position, ample FX reserves, and a wide interest-rate differential.
- Tourism performance remains the main short-term risk to FX stability.
- The real exchange rate is expected to stay historically high, assuming export-sector setbacks remain manageable. Over time, faster domestic wage and price growth implies that nominal depreciation is unavoidable, whether gradual or sudden.
- The baseline forecast assumes a gradual weakening of the ISK, ending 5–6% lower than end-2025 levels by the end of the forecast horizon. This corresponds to roughly ISK 156–157 per EUR.

Domestic balance sheets remain broadly healthy

Private sector debt ratios are stable and public debt is on a more favourable trajectory than major economies

Investment to dip temporarily in 2026

Turning point in data centre development and a challenging environment impacts in the near term

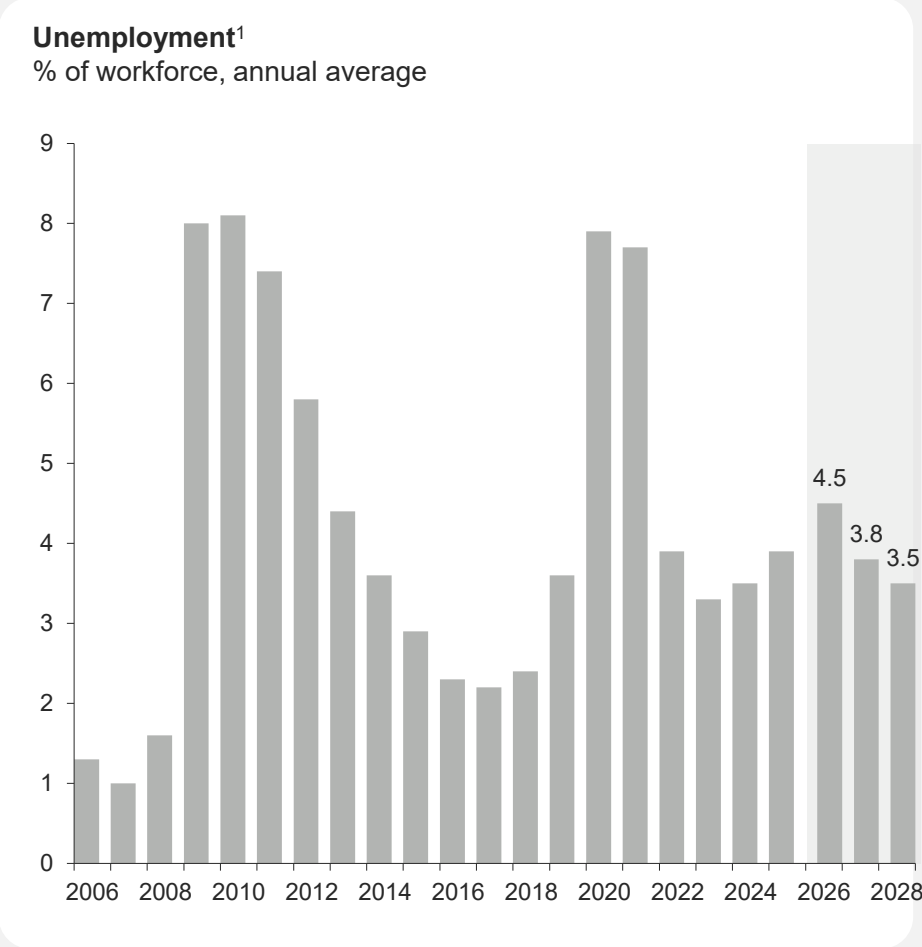

Highlights

- Investment has surged in recent years, led by strong business investment in tourism, fishing, and IT. Higher real interest rates and strain on the export sector have tempered growth, but rapid expansion in data centres and aquaculture has provided a buffer.
- For 2025, full-year growth is estimated at just under 4%, driven mainly by data-centre and aquaculture projects.
- Investment is projected to contract by just over 4% in 2026, reflecting an almost 8% decline in business investment. Residential investment is expected to remain broadly flat, with only modest growth in public investment.
- The decline in business investment stems from the tapering of data-centre construction, reduced spending on transport equipment and machinery, and slower hotel and commercial property development, partly offset by increased infrastructure-related investment.
- Investment growth will resume later in the forecast horizon, supported by lower interest rates, improving export-sector conditions and continued expansion of energy infrastructure and aquaculture. Residential investment is also expected to recover.
- Íslandsbanki Research forecasts investment growth just above 1% in 2027 and 3–4% in 2028.

Unemployment to peak in 2026

Wage developments will be shaped by long-term contracts, and wage drift will be limited

Highlights

- The labour market has cooled after several years of tight conditions. Unemployment edged up in 2025, averaging 3.9%, owing mainly to export-related shocks in tourism and metals production. Despite this, firms have generally adjusted staffing through flexibility rather than layoffs, and the market remains relatively stable.
- There are clear signs of increased slack. Immigration has slowed markedly, and Gallup surveys show that labour shortages have receded sharply. Only 10% of executives at large firms now report being understaffed — the lowest share since 2020 — indicating that labour market tensions are easing.
- Unemployment is expected to rise further in 2026, reaching an annual average of 4.5% as labour demand cools, particularly in export sectors. From 2H2026 onward, unemployment is projected to decline again. The jobless rate is expected to average 3.8% in 2027 and approach its equilibrium level of 3.5% in 2028.
- Wage developments will continue to be shaped by the long-term contracts agreed in 2024, which run through 2028, provided their underlying assumptions hold. Despite greater labour market slack, wage increases will continue broadly in line with those agreements.
- Wages rose by 7.9% in 2025. We forecast average wage growth of 6.6% in 2026, 6.0% in 2027, and 4.9% in 2028. Wage drift will remain modest because labour market pressures are receding.

Private consumption growth to continue in 2026, but at a slower pace

Real wage growth and sizeable savings will support household consumption in the coming term

Personal vehicles, new registrations and imports
ISK m (left) and number of vehicles (right)

Private consumption and related indicators
% change YoY (left) and index value (right)

Highlights

- Private consumption rebounded strongly in 2025 after two slower years marked by high interest rates and precautionary saving. Consumption picked up markedly as households began to loosen their purse strings.
- Private consumption grew by 3.6% YoY in the first nine months of 2025, and indicators suggest a strong Q4 as well. Year 2025 growth is therefore estimated at 3.8%, driven in part by a surge in car purchases ahead of changes in public levies.
- Households remain in a relatively strong financial position. Savings levels are still high, and real wages increased by 3.7% in 2025, supporting consumption. Nevertheless, consumer sentiment has weakened in recent months, with the Gallup Confidence Index falling below equilibrium, likely due to export shocks, persistent inflation, and uncertainty in lending markets.
- The private consumption forecast for 2026 has been revised slightly downward. We now expect consumption to grow 2.4%, reflecting a cooler economy, a softer labour market, and the front loading of car purchases into late 2025.
- Further ahead, consumption growth is expected to strengthen again as economic activity picks up. Private consumption is projected to grow by 2.8% in 2027 and 3.1% in 2028.

The real estate market holds quite steady despite high interest rates

Inflation remains stubbornly above target

Something will probably have to give in order to bring inflation back to target

Highlights

- Inflation remained stubborn in 2025, hovering consistently around the 4% upper deviation threshold of the Central Bank’s target. November briefly surprised to the downside, with inflation plunging to 3.7%, the lowest reading in five years, but it rebounded sharply to 4.5% in December.
- The upward momentum continued into January 2026, when inflation rose further to 5.2%, the highest measurement since September 2024.
- Despite the early 2026 uptick, inflation is projected to ease quickly in Q2. For 2026 as a whole, ÍSB Research forecasts average inflation of 4.0%, broadly unchanged from 2025.
- Inflation is expected to decline further in the following years, averaging 3.6% in 2027 and 3.5% in 2028, although underlying price pressures will remain.
- Wage developments are still misaligned with the target, rent prices are not falling, and households and businesses remain relatively strong despite high interest rates.
- In our assessment, something will likely have to give for inflation to reach target over the forecast horizon — for instance, a harder economic landing or a period of stagnant rent prices.

Central Bank needs to walk a fine line

Interest rate cuts to resume in spring, with slow and gradual monetary easing

Policy rate and inflation

%, Real policy rate based on 12m forward forecast

Key interest rates

%, average per year

Highlights

- Following a 6 month pause in its rate cut process the Central Bank of Iceland cut its policy rate in Nov-25 by 0.25 ppoints, to 7.25%.
- Forward guidance in November indicated that further easing required clear evidence of inflation returning toward target.
- Recent data show no such evidence, as short-term inflation indicators and expectations have not improved. And breakeven inflation has risen since early December, and long-term expectations remain above target, even as the broader economy cools rapidly.
- We expect the MPC to hold rates steady until inflation resumes its decline, with rate cuts likely restarting in spring 2026 and continuing cautiously through mid-2027.
- Unless inflation falls more than forecast or economic slack widens further, the unwinding phase is projected to end with a policy rate of 5.5–6.0%.
- Long-term interest rates remain high, with nominal 10-year Treasury yields around 6.6% and indexed yields at 2.7%, leaving Iceland’s real rates elevated by international standards.
- Long-term nominal rates may fall to 5.9% and real rates to 2.5% over the forecast horizon.

MOODY'S IN SEPTEMBER 2025

- "The stable outlook reflects balanced risks at the A1 rating level."
- "We expect fiscal consolidation to continue over the coming years and the economy is expected to return to robust growth this year, after a temporary contraction last year as tight monetary and fiscal policy helped slow the previously overheated economy."
- "While Iceland's economic and fiscal conditions could improve faster than we expect, its small and less diverse economy makes it particularly susceptible to shocks affecting specific sectors."

FITCH IN AUGUST 2025

- "The Positive Outlook reflects Iceland's strengthened public finances. General government debt is projected to fall significantly in 2025 after the successful settlement of the HF Fund liabilities and the full privatization of Íslandsbanki."
- "Fitch's fiscal baseline indicates debt-to-GDP ratio will follow a gradual downward trend, reaching 47.6% in 2 by 2027."
- Progress continues in diversifying the economy into highvalue-added sectors, such as pharmaceuticals, information and communications technology and biotechnology."

S&P IN SEPTEMBER 2025

- "The stable outlook reflects our view that Iceland's growth will rebound over the next few years, and fiscal and external deficits will remain contained."
- "The outlook also reflects our assumption that neither volcanic activity nor global trade tensions will have a significant sustained adverse effect on the country's economic, fiscal, and balance-of-payments performance."
- Iceland's key aluminum exports are mostly sold to European markets, partially mitigating current U.S. tariff related risks."
- We could raise the ratings if Iceland's public finances improved significantly.. [..or..] ..if we took the view that increasing diversification made the economy more resilient to external shocks and current global trade tensions eased."

Disclaimer

This presentation is for information purposes only and shall not be construed as an offer or solicitation for the subscription or purchase or sale of any financial instrument.

All information contained in this presentation should be regarded as preliminary and based on company data available. The information set out in this presentation has not been independently verified. Due to rounding, numbers presented throughout this document may not add up precisely to the totals provided and percentages may not precisely reflect the absolute figures. Due care and attention has been used in the preparation of forecast information. However, actual results may vary from their forecasts, and any variation may be materially positive or negative. Forecasts, by their very nature, are subject to uncertainty and contingencies, many of which are outside the control of Íslandsbanki.

No representation or warranty is made by Íslandsbanki as to the accuracy, completeness or fairness of the information or opinions contained in this presentation. The information in this material is based on sources that Íslandsbanki believes to be reliable. Íslandsbanki can however not guarantee that all information is correct. Furthermore, information and opinions may change without notice. Íslandsbanki is under no obligation to make amendments or changes to this publication if errors are found or opinions or information change.

Íslandsbanki and its management may make certain statements that constitute "forward-looking statements". These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as "anticipates," "targets," "expects," "estimates," "intends," "plans," "goals," "believes" and other similar expressions or future or conditional verbs such as "will," "should," "would" and "could".

The forward-looking statements represent Íslandsbanki's current expectations, plans or forecasts of its future results and revenues and beliefs held by the company at the time of publication. These statements are not guarantees of future results or performance and involve certain risks, uncertainties and assumptions that are difficult to predict and are often beyond Íslandsbanki's control. Actual outcomes and results may differ materially from those expressed in, or implied by, any of these forward-looking statements.

Forward-looking statements speak only as of the date they are made and Íslandsbanki undertakes no obligation to update any forward-looking statement to reflect the impact of circumstances or events that arise after the date the forward-looking statement was made.

Íslandsbanki does not assume any responsibility or liability for any reliance on any of the information contained herein and accepts no liability whatsoever for any direct or indirect loss, howsoever arising, from use of this presentation.

Íslandsbanki is the owner of all works of authorship including, but not limited to, all design, text, sound recordings, images and trademarks in this material unless otherwise explicitly stated. The use of Íslandsbanki's material, works or trademarks is forbidden without written consent except where otherwise expressly stated. Furthermore, it is prohibited to publish material made or gathered by Íslandsbanki without written consent.
